

Putzmeister

P 9 UL truck mixer

Concrete transportation – convenient, durable, ultra light

Concrete heavyweight makes light work of concrete transportation

A perfect combination of low weight and durability

The low unladen weight of the P 9 UL is a crucial factor in its successful deployment, time after time, since any reduction in weight increases the working load and reduces costs for fuel, tyres, charges and taxes. In addition, you also have to comply with certain regulations (some of which are specific to certain countries) pertaining to the vehicle's unladen and gross weight. The P 9 UL relieves this burden. But this does not mean that you have to sacrifice a particularly long service life. And to ensure that this is the case, amongst other things, the outstanding wear properties, toughness, strength and hardness of Hardox come into play.

The use of Hardox 400/450 in the drum, spiral blade and lateral edge protection, as well as in the chute, discharge tray and filling hopper, has the following benefits:

- 20 % reduction in weight compared to normal, 4.5-mm thick steel structures
- Reduced consumption and operating costs
- The same, long service life
- Greater working load – higher payload
- Plates need to be replaced less often

The flexible universally jointed shaft cover is of high quality and can be removed in no time at all if maintenance work is necessary.

The tools that are brought along can be transported safely in an easily accessible, integrated toolbox.

Save time without sacrificing safety – safety elements such as reflective bands on the aluminium mudguards, which have a new shape, can easily be applied.

Easier accessibility and greater clearance, even with short wheelbases, are provided thanks to the water line integrated in the ladder hook.

Thanks to the carefully conceived design of the lateral hook contours, the ladder is safe and easy to use.

The P 9 UL at a glance

Technical data

Nominal fill	9.0 m ³
Water line	9.8 m ³
Geometric volume	15.1 m ³
Height	2730 mm
Weight	3350 kg

Sophisticated features of the Putzmeister truck mixer

Optimized drum geometry

- Low centre of gravity
- Low bodywork height
- Double drip ring

Enlarged platform with ergonomically shaped railing

- Easy and safe cleaning
- Optimised protection for knees against spray

Large manhole – dia. 580 mm

- Easy inspection and cleaning
- Particularly user friendly, for example thanks to perfectly designed anti-trapping mechanisms, improved accessibility and even easier cleaning
- Optimised design enables elements to be applied

Long discharge chute – 1.45 m

- Ease of access to the pump and crane bucket

Closed mixer frame made of S500 steel

- Improved stability of the whole superstructure

Underride protection with step

- Safe, ergonomic operation

Closed rear as far as the truck chassis

- Easier cleaning
- Reduced contamination

Integrated storage compartment

- Tools such as grease guns easily accessible
- Safe storage outside of the driver's cab

Reduced consumption and operating costs

- Components made of wear-resistant Hardox steel
- Optimal corrosion protection
- Aluminium attachments
- High payload capacities as a result of a further reduction in weight thanks to the robust lightweight construction

Note: The illustrations may differ from series models.
