

TransMix Evolution

The mobile floor screed factory

Example setup for a TransMix 3200 Evolution

- 3-Axle semi-trailer
- Aluminium box body: 30 m³
- Aggregate compartment: 14 m³
- Binder compartments: 2 × 8 m³ divided boxes
- Binder blow-in system: Both compartments with tanker connection
- Aggregate blow-in system: With an additional liner, can be used for items such as polystyrene balls
- Mechanical sliding roof, park position at front
- Hydraulic rear supports
- Water tank: 1,000 l
- Blower and generator driven by integrated power-pack

The BRINKMANN TransMix is our screed factory on wheels. The fully automated transport, mixing and conveying system “made in Germany” offers many advantages:

- Short setup-times and less labour costs
- Precise metering of all materials for maximum screed quality
- Minimizes the delivery cost of materials due the higher quantities supplied
- Material residues and packaging waste are avoided and so do not need to be disposed of

Depending on your type of application (cement based screed, self-levelling screed or cement bonded insulation materials) and your logistical requirements, we can configure your TransMix system to meet your needs. Putzmeister has expanded the available equipment options for the TransMix Evolution, as well as adding many standard components specifically optimized for safety, ergonomics and reliability.

BRINKMANN

Improved construction for a continuous material flow

- Optimized air connections to agitate material for an improved flow
- Refilling can be done in horizontal and upright positions
- Valves for flutter and vibrator, mass flow controlled
- Less build-up due to special coating of side walls

Additional components for your Safety

- Safety grid on the top and working areas of the compartments
- Passage to the aggregate compartment fitted with ladder and railings
- Improved safety grid design

Optimized control system for time-saving operation

- Precise and rapid dosing
- Clear data logging
- Half and quarter size batches can be selected
- Pause function
- All functions available via control box or radio remote control

Our sophisticated concept for more efficient work

- Aggregate inliner for lightweight items like polystyrene balls that can be drawn in by an installed fan
- Material can be changed with minimal cleaning effort
- Inspection hole in the mixer lid
- Permanently mounted additive metering pumps with quick couplings
- Easy cleaning due to inclined mixer
- Second outlet on discharge chutes to enable complete emptying of binder and aggregate compartments
